

7 WAYS

to a more Sustainable Surgical Instrument Procurement Model

Allow us to support you in achieving your goals of a more Sustainable Surgical Instrument procurement model?

Reduce waste in the clinical field by replacing disposable/single use products with reusable products, here are some simple ways this can be done;

1

Choose reusable surgical instruments instead of single use, we can help identify reusable alternatives to customers single use instruments and help to switch over.

2

Change from plastic gallipots, receivers and kidney dishes to stainless steel reusable products.

3

Switch from single use diathermy quivers to a high-quality reusable quiver from our new extended range – visit our website for further details.

4

Repair, refurbish and maintain your existing inventory instead of buying new.

5

Remove single use hand restraint products from your inventory and move to a more sustainable, fully recyclable and reusable product such as Mitt-Matt with a much lower cost per use to boot.

6

Buy from a Company who has been working towards a more environmentally sustainable business model for the past 6 years with sustainability embedded within it. Visit the Sustainability Charter on our website for further information on how we are doing this.

7

Use a company who combine deliveries for different departments into one efficient delivery, drastically reducing costs and carbon emissions.
